C-Design | Micro Concrete

Inspired by classic concrete-look floors, C-Design combines soft lines with a seamless appearance. Depending on the intensity of the pattern, darker and lighter areas may appear, while the overall surface remains balanced. Its matte texture and grey tone complement a wide range of materials and deliver an elegant result in many applications.

Concretta Design is applied in a 2-3 mm layer over many existing surfaces. It is formulated for areas exposed to light foot traffic such as cafes, offices, bathrooms, homes, and interior or exterior floors and walls. Its water-resistant properties are especially useful in bathrooms and kitchens, while its slip-resistant finish provides added practicality outdoors.

Interior use: bathrooms, kitchens, living areas, offices, shops and restaurants.

Exterior use: walkways, building entrances, galleries, pool surrounds and facades.

Floors: can be applied over existing concrete, ceramic, marble and mosaic surfaces.

Walls: can be applied over plaster, plasterboard, render and ceramic surfaces.

Concretta is an excellent choice for those seeking distinctive design elements and a contemporary finish.

Trust your creativity...

SAVES TIME

There is no need to remove the existing surface. It adheres strongly even to difficult substrates such as ceramic, mosaic, epoxy and steel, and can be applied over almost any sound surface.

C-Furniture | Concrete Furniture & Accessories

When people hear 'concrete furniture', they often imagine extremely heavy and unattractive pieces suitable only for parks or bus stops. Today, however, modern concrete furniture can be elegant, lightweight and far more durable than many conventional materials. Furniture finished with a decorative concrete appearance combines outstanding functionality with a refined aesthetic.

Let them be unique...

Moisture-resistant; ideal for wet areas and waterproofing applications.

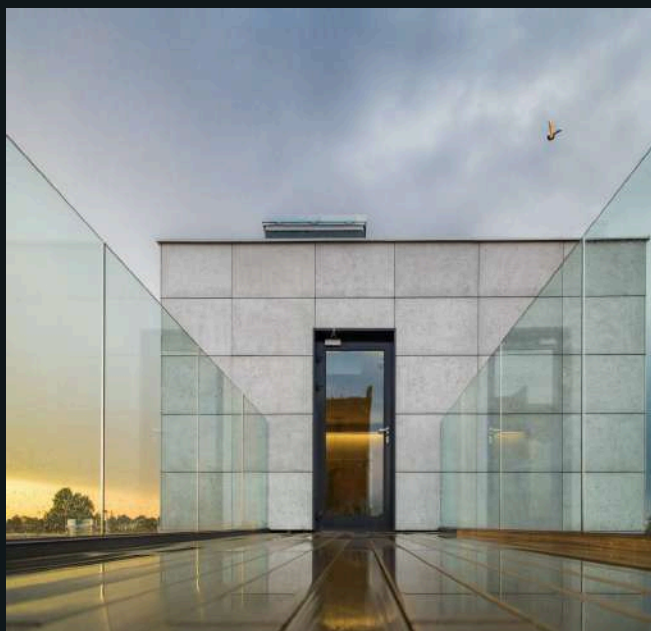

AVAILABLE IN MANY COLORS

Decorative, natural lines and a seamless concrete appearance complement contemporary architecture.

C-Panel | Natural Fair-Faced Concrete Panel

Concrete represents freedom, openness and breaking conventions. Our concrete series works especially well in industrial and loft-style interiors, creating a bold character when paired with contemporary forms and a palette dominated by black, white and grey. C-Panel consists of 7-11 mm panels made from pure cement, quartz and organic materials. Designed as a decorative solution indoors and a fast facade solution outdoors, the panels achieve A1 fire classification due to their mineral composition. They can be installed over existing surfaces to create striking results in a short time.

C-Panel is used decoratively indoors and as a fast solution on exterior facades.

C-Oxido | Rust-Look Surfaces

The Oxido series was created to celebrate the striking imperfections of metal and stone at different stages of weathering. Organic processes reveal the richness and complexity of oxidation and the authentic beauty of materials as they age. Oxido's unique technology gives designers the freedom to explore the unconventional, producing a distinctive range of colors that enhances these remarkable surfaces.

It is an acidic system used to create a rusted effect on concrete surfaces, producing the appearance of iron or weathered stone.

With its oxidized character and unconventional lines, Concretta Oxido is a natural choice for loft interiors and industrial design concepts.

INDUSTRIAL FACILITIES, STORAGE AREAS, OFFICES, HOMES, GALLERIES, SHOPS, SHOWROOMS AND OTHER COMMERCIAL SPACES - CREATING HEALTHY, LONG-LASTING AND MODERN SURFACES.

C-Ultima | Industrial Floor Coating

Concretta Ultima is specially developed for factories, airports, industrial facilities, warehouses, shopping centers and other areas exposed to heavy loads and foot traffic. It is easy to apply and returns to service quickly. With compressive strength up to 40 MPa, it is suitable for heavy-duty traffic, long-lasting, dust-free, crack-resistant and easy to keep clean.

Interior use: factories, industrial facilities, storage areas, shopping centers and airports.

Exterior use: walkways, building entrances, galleries, pool surrounds and facades.

Floors: can be applied over existing concrete, ceramic, marble, parquet and mosaic surfaces.

FAST CURING

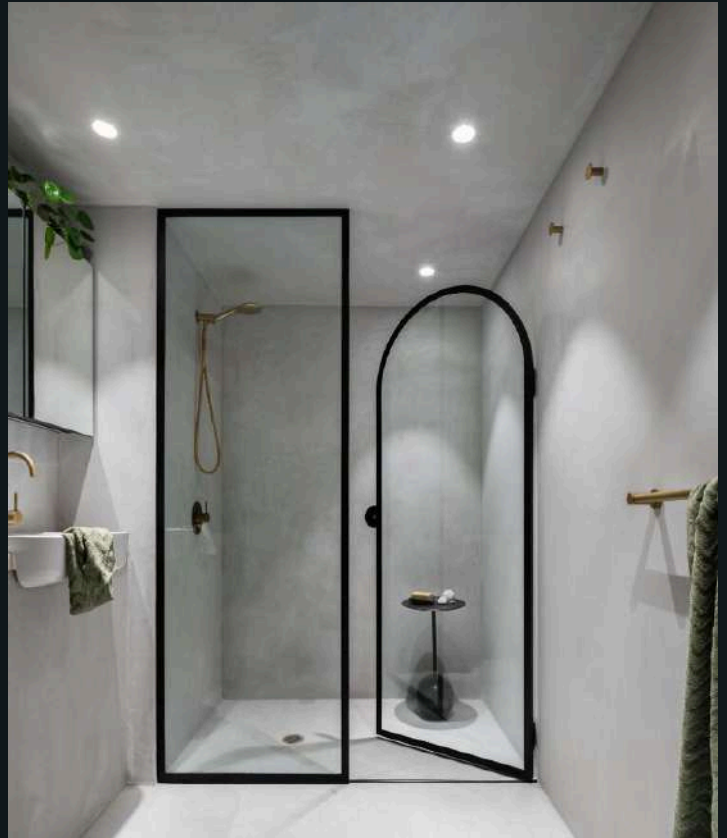

Its rapid curing allows foot traffic after approximately 3 hours.

Home is
not a place
it's a
feeling.

Concretta Micro Concrete

1. What is Concretta?

Concretta is a cement-based coating that can be applied in a thin layer (approximately 1-3 mm) over many surfaces, including tiles and wood. It provides a hygienic, stain-resistant finish for bathrooms and kitchens. Its slip-resistant and mould-resistant characteristics make it suitable for interior and exterior floors.

2. Why use Concretta?

Pre-packaged: Concretta is supplied as a single-component, pre-packaged mix for easy use. It can be mixed and applied without specialised equipment.

Fast drying: It dries quickly after application, helping projects progress faster without the need for expensive professional tools.

3. What are the main advantages?

- No compaction is required, so heavy machinery is unnecessary.
- Low permeability makes it suitable for facades, kitchens and bathrooms.
- It can be applied to almost any sound surface.
- Chloride-free for a safe and durable finish.
- Minimal shrinkage helps reduce cracking and curling.

4. How is Concretta used?

Concretta is used in both residential and commercial projects, including floors, walls, counters and shelving, where it creates a seamless, durable and contemporary finish. It is suitable for interior and exterior surfaces and is especially practical in kitchens and bathrooms. A wide range of textures, tones and colors is available.

Concretta is an excellent material for creating distinctive designs with a modern finish.

5. How is Concretta applied?

No specialised machinery is required.

Surface preparation: the substrate must be clean and free of loose aggregate, sand and dust.

Mixing: Concretta can be mixed by hand; for larger projects, a mixing container or suitable mixer makes the process easier.

Application: apply immediately after mixing, level with clean tools and allow the surface to dry.

Concretta is a versatile and reliable choice for a wide variety of project surfaces.

Concretta Panel

A composite material made from pure cement, quartz and organic materials.

Contains no polyester resin, plastics, asbestos or similar chemicals.

As a cement-based product, it is 100% odourless and poses no health risk.

Its mineral composition gives it natural Class A fire resistance.

The primary installation method is adhesive bonding; mechanical screw support may also be used.

Easy to cut and process with standard carpentry tools.

A dedicated surface treatment helps prevent concrete dust.

Easy Installation

Alongside its strong visual impact, Concretta panels are quick and easy to install using practical adhesives and fixings. This can shorten construction time, allows smaller installations to be completed directly, and reduces labour costs on larger projects.

Panel Sizes

Ready-to-install concrete panel

Standard size: 60 cm x 120 cm

Thickness: 7 mm (+/-10%); weight: 8-9 kg/m²

Custom sizes up to 130 cm x 250 cm are available.

Custom coloring is possible.

Applications

Interior and exterior facades
